

AKMAL SHAREEF

Software Engineer

ABOUT ME

I have been professionally designing and developing everything from great user experiences on the front end to complex enterprise-grade business logic on the back end. I am a passionate programmer, taking pride in the robust and maintainable code I write. I am a continuous learner, and I am not afraid to step into unfamiliar territory.

WORK EXPERIENCE

CXS Analytics | 05/2025 - present

Full Stack Developer

- Developing and maintaining HRIS SaaS web application.
- Delivering high quality, and robust enterprise grade features such as role-based access control and approval workflows.
- Reviewing incoming merge requests and providing technical feedback to enforce code quality and improve overall project reliability.
- Partaking in large scale refactoring of complex legacy codebases to reduce technical debt and speed up future development.
- Providing development advice leveraging technical knowledge, contributing to informed decision-making within the team.

CTAPPS MSC | 03/2023 - 04/2025

Full Stack Developer

- Built scalable multi-tenant CRM SaaS platform for customer reach and engagement.
- Developed custom WhatsApp web client for support staff with CRM integration, improving communication and support response times.
- Implemented FreeSwitch PABX telephony architecture.
- Connected backend PABX telephony systems to a web management interface.
- Wrote unit and feature tests to improve code reliability.
- Wrote and maintained documentation of new features.

Freelance | 01/2022 - 02/2023

Web Developer

- Designed front-end UI using React, Svelte, and Tailwind to enhance user experience and interface responsiveness.
- Developed RESTful APIs with Express.js, implemented MongoDB for database management, and integrated OAuth and Socket.io for improved user authentication and real-time communication.

EDUCATION

Universiti Kuala Lumpur |
07/2017 - 07/2021

Bachelor of Aircraft Engineering Technology (Honours) in Mechanical Engineering

Propeller Noise Reduction
Research - Designed
programmed, and 3D printed an
Arduino powered 6 sensor array
testbed capable of real time
data streaming and analysis.
